FlexTrack stainless steel tube rail system

Salco FlexTrack is a tube rail system engineered for industrial environments where durability, efficiency, hygiene, and flexibility are critical. Its fully enclosed design provides unique advantages that meet the stringent requirements of a wide range of sectors. FlexTrack is available with either an electric or manual drive.

FlexTrack features

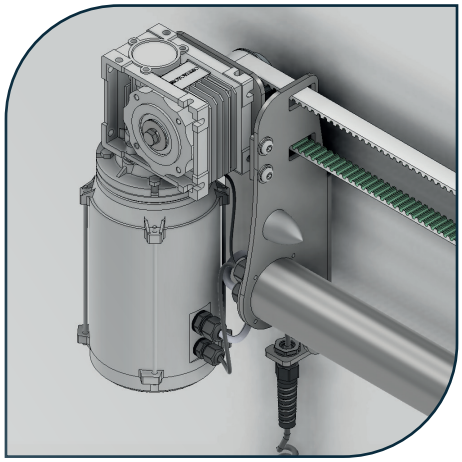

- ✓ **Electric** and **manual** operation
- ✓ Suitable for **hygienic environments**
- ✓ **Food-safe**
- ✓ Made from **stainless steel 304**
- ✓ **Corrosion-resistant**
- ✓ Fully **circular** material
- ✓ **Low maintenance**
- ✓ Easy to **adapt**
- ✓ **CE-certified**

Stainless steel drop

Salco's FlexTrack patented stainless steel drop is an innovative design feature. This drop mechanism allows the door to move slightly downward and backward, ensuring a tight fit against the frame. The result is excellent door sealing and insulation, providing an energy-efficient solution for your door system.

Sustainable and safe

The rail system is constructed entirely from stainless steel, ensuring a long service life and making it easy to clean. The distinctive drop design not only improves the effectiveness of the door's closure but also prevents the door from accidentally lifting out of the rails.

Technical data FlexTrack

Material	Stainless steel (SS 304) for optimum durability and corrosion resistance
Rail system	Drop/lift rail system
Dimensions tube	0 t/m 5000 mm length
Control	Electric or manual
Weight capacity	Door up to 250kg
Safety options	Integrated safety features such as dropout protection and stainless steel drop
Certification	CE certified for safety and quality

FlexTrack applications

- ✓ **Food** processing facilities
- ✓ **Fish** and **meat** processors
- ✓ **Cleanrooms**
- ✓ **Pharmaceutical** manufacturing
- ✓ **Temperature controlled** warehouses
- ✓ **Energy-efficient** distribution centers
